Company profile

Got it 👍 You want to understand how a **company can run trading in Forex & Crypto using bots and make profits over many years (like 12 years)**. Let me explain step by step:

Company Trading with Bots in Forex & Crypto

1. How It Works

A trading company builds or buys AI/Algorithmic Bots.

These bots trade in Forex (currencies) and Crypto (Bitcoin, Ethereum, etc.) automatically.

The company sets different strategies (scalping, arbitrage, trend-following).

Bots trade 24/7, managing thousands of trades daily → creating steady profits.

About us of the **Stock Market**

The **Stock Market** is the heart of the global financial system, where investors, companies, and governments come together to trade securities. It serves as a powerful platform that connects businesses seeking capital with individuals and institutions looking for investment opportunities.

At its core, the stock market is built on **trust, transparency, and growth**. It empowers companies to raise funds for expansion through the issuance of shares, while giving investors the chance to share in their success. Beyond just trading, it reflects the overall economic health of nations, acting as a barometer for growth and stability.

What is the Crypto Tradig

Crypto trading means **buying and selling cryptocurrencies** (like Bitcoin, Ethereum, etc.) in order to make a profit. It works somewhat like stock trading, but instead of company shares, you trade digital currencies.

Cryptocurrency → A digital currency that uses blockchain technology (e.g., Bitcoin, Ethereum, Binance Coin).

Trading Platforms/Exchanges → Websites or apps like Binance, Coinbase, WazirX, where traders buy/sell crypto.

Volatility → Crypto prices change very quickly, which creates profit opportunities but also high risk.

Trading Pairs → You can trade crypto against another crypto (BTC/ETH) or against fiat money (BTC/INR, BTC/USD).

What is Forex Market Works

The **Forex market (Foreign Exchange market)** is the world's largest financial market where people, banks, companies, and governments **buy and sell currencies**.

Currency Pairs

Currencies are always traded in pairs (e.g., EUR/USD, GBP/JPY).

The first currency is the base currency, the second is the quote currency.

Example: $\text{EUR/USD} = 1.10 \rightarrow$ means 1 Euro = 1.10 US Dollars.

Price Movement

If you think the Euro will get stronger than the Dollar, you buy EUR/USD.

What is Bot / Robot Trading?

Bot trading (also called algorithmic or automated trading) means using a **computer program (robot)** that automatically buys and sells assets (like crypto, forex, or stocks) based on pre-set rules or strategies.

Instead of a human clicking "buy" or "sell," the **trading bot does it for you 24/7**.

How Robot Trading Works

Set Strategy → The trader defines rules (for example: buy Bitcoin if price drops 5% in 1 hour, sell if it rises 10%).

Automation → **The bot monitors the market continuously.**

Execution → When the conditions are met, the bot places trades automatically (much faster than humans).

24/7 Trading → Bots don't need sleep, so they trade even when you're offline.
